# Series LF 1001-1100 464 PSI

1) Connection for the potential equalization, only for application in the explosive area.

# Assignment of connections and functions

- A: air bleeding BSPP1/2
- B: air bleeding BSPP1/2
- C: mini-measuring connection BSPP1/4, dirt side
- D: mini-measuring connection BSPP1/4, clean side
- E: drain BSPP1/2, dirt side

Weight LF 1001: approx. 104 lbs. Weight LF 1100: approx. 126 lbs.

Dimensions: inches

Designs and performance values are subject to change.

# **Pressure Filter** Series LF 1001-1100 464 PSI

# **Description:**

In-line filters of the type LF 1001-1100 are suitable for a working pressure up to 464 PSI. Pressure peaks are absorbed with a sufficient margin of safety. It can be used as suction filter, pressure filter and return-line filter.

The filter element consists of star-shaped, pleated filter material, which is supported on the inside by a perforated core tube and is bonded to the end caps with a high-quality adhesive. The flow direction is from outside to inside.

For cleaning the stainless steel mesh element (see special leaflets 21070-4 and 39448-4) or changing the filter element, remove the cover and take out the element. The mesh elements are not guaranteed to maintain 100% performance after cleaning.

For filtration finer than 40  $\mu\text{m},$  use the disposable elements made of microglass. Filter elements as fine as 5 µm(c) are available; finer filter elements are available upon request.

Eaton filter elements are known for a high intrinsic stability and an excellent filtration capability, a high dirtretaining capacity and a long service life.

Eaton filter can be used for petroleum-based fluids, HW emulsions, water glycols, most synthetic fluids and lubrication fluids. Consult factory for specific fluid applications.

The internal valves are integrated in the filter cover. After reaching the bypass pressure setting, the bypass valve will send unfiltered partial flow around the filter.

Ship classifications available upon request.

OP = visual, see sheet-no.1628 OE = visual-electric, see sheet-no.1628

= electronic, see sheet-no.1641

To add an indicator/sensor to your filter, use the corresponding indicator data sheet to find the indicator details and add them to the filter assembly model code.

Filter element: (ordering example)

#### Accessories:

- gauge port and bleeder connection, see sheet-no. 1650
- drain- and bleeder connection, see sheet-no. 1651
- SAE-counter flanges, see sheet-no. 1652

## **Technical data:**

 $\begin{array}{ll} \mbox{design temperature:} & \mbox{14 °F to +212 °F} \\ \mbox{operating temperature:} & \mbox{14 °F to +176 °F} \end{array}$ 

operating medium: mineral oil, other media on request

max. operating pressure: 464 PSI test pressure: 900 PSI max. operating pressure with IS20: 232 PSI test pressure with IS20: 464 PSI

process connection: SAE-flange connection 3000 PSI

housing material: EN-GJS-400-18-LT

sealing material: Nitrile (NBR) or Viton (FPM), other materials on request

installation position: vertical measuring connections: BSPP ¼ drain- and bleeder connections: BSPP ½ volume tank LF 1001/1100: 3.5 Gal.

Classified under the Pressure Equipment Directive 2014/68/EU for mineral oil (fluid group 2), Article 4, Para. 3. Classified under ATEX Directive 2014/34/EU according to specific application (see questionnaire sheet-no. 34279-4).

# Pressure drop flow curves:

## Filter calculation/sizing

The pressure drop of the assembly at a given flow rate Q is the sum of the housing  $\Delta p$  and the element  $\Delta p$  and is calculated as follows:

 $\Delta p_{assembly} = \Delta p_{housing} + \Delta p_{element}$  $\Delta p_{housing} = (\sec \Delta p = f(Q) - characteristics)$ 

$$\Delta p_{\, element} \, (PSI) = \quad Q \, \left( GPM \right) \, x \, \, \frac{MSK}{1000} \, \left( \frac{PSI}{GPM} \right) x \, \, \nu \left( SUS \right) \, x \, \, \frac{\rho}{0.876} \, \left( \frac{kg}{dm^3} \right)$$

For ease of calculation our Filter Selection tool is available online at <a href="www.eatonpowersource.com/calculators/filtration/">www.eatonpowersource.com/calculators/filtration/</a>

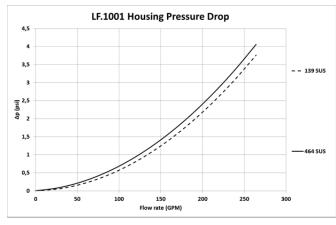

## Material gradient coefficients (MSK) for filter elements

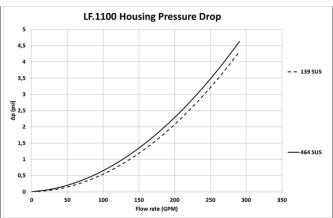

The material gradient coefficients in psi/gpm apply to mineral oil (HLP) with a density of 0.876 kg/dm³ and a kinematic viscosity of 139 SUS (30 mm²/s). The pressure drop changes proportionally to the change in kinematic viscosity and density.

LF	VG					G			API		
	3VG	6VG	10VG	16VG	25VG	25G	40G	80G	130G	10API	25API
1001 / 1100	0.241	0.167	0.107	0.093	0.064	0.0061	0.0057	0.0039	0.0029	0.053	0.024

# $\Delta p = f(Q)$ – characteristics according to ISO 3968

The pressure drop characteristics apply to mineral oil (HLP) with a density of 0.876 kg/dm³. The pressure drop changes proportionally to the density.

# Symbols:

without indicator

with bypass valve

with electric indicator AE 30 and AE 40 with visual-electric indicator AE 50 and AE 62

with visual-electric indicator AE 70 and AE 80

with visual indicator AOR/AOC/OP with visual-electric indicator

with electronic sensor

item 12 execution only without clogging indicator or clogging sensor

#### Test methods:

Filter elements are tested according to the following ISO standards:

ISO 2941 Verification of collapse/burst resistance ISO 2942 Verification of fabrication integrity

ISO 2943 Verification of material compatibility with fluids

ISO 3723 Method for end load test

ISO 3724 Verification of flow fatigue characteristics

ISO 3968 Evaluation of pressure drop versus flow characteristics ISO 16889 Multi-pass method for evaluating filtration performance
